

AWIPS OB6

DAB-HMM: New Functionality

& Some Noticeable Bug Fixes

September 9, 2005

Task	Description
FFMP	<u>Basin Trace</u> Now you can use FFMP to choose a basin and show the up and/or downstream area/path related to that chosen basin. The graphic will crosshatch or stipple the area of interest.
FFMP	<u>Trend/Trace Choice</u> Now that we have both the Basin Trend and Basin Trace capabilities, we have provided a choice between the two, so that you can do either form the Basin table or the D2D color image.
FFMP	<u>Multiple Monitor Times</u> You can now use the FFTI to set up to 3 attribute/time frame sets for FFMP to monitor at the same time.
FFMP	<u>Gage Removal Method</u> If you have seen gages (VGBs) being used by FFMP that you don't care about at all, you can now provide the ID of that gage and it will be ignored by FFMP. This requires a re-localization.
