

AWIPS OB1

DAB-HMM: New Functionality

& Noticeable Bug Fixes

October 25, 2002

Task	Description
FFMP	The text pop up from the FFTI button now includes the time frame being monitored.
FFMP	The county list in the Basin Table now shows the county name with the state abbreviation, with the FIPS codes available via sampling. (It used to be the other way around.)
FFMP	The rate units have been corrected in the FFMP display sampling in the D2D.
FFMP	The forcedFFG application now works on LINUX.
FFMP	The maximum accumulation thresholds used in the FFTI have been increased to accommodate a tropical Z/R.
FFMP	The -scan localization is no longer needed on the servers and has been removed from the various localization scripts.
FFMP	The Refresh button in the Basin Table will now be highlighted if something has changed in the Basin Table that would require the FFMP display in the D2D to be updated in order for the two display components to agree.
FFMP	The legend in the Basin Trend window now shows the specific threshold ranges for the colors.
FFMP	The Basin Trend FFG plot has been given the ½ hour extrapolated value at the zero point.
FFMP	When FFMP gets loaded, if there are no data files to read, a message window will pop up and tell you so.
FFMP	The "Sampling" option is now available in the D-2D right-click menu.
