Continuation of Section 15: KNOWN OR PROPOSED SOLUTION

To facilitate the addition of these products to NDGD, we are requesting that new subdirectories (GT.gimp) be added to the operational areas of the NDGD ftp server:

[ftp://tgftp.nws.noaa.gov/SL.us008001/ST.opnl/DF.gr2/DC.ndgd/GT.gimp/AR.conus/RT.XX \(XX=00-23\)](ftp://tgftp.nws.noaa.gov/SL.us008001/ST.opnl/DF.gr2/DC.ndgd/GT.gimp/AR.conus/RT.XX (XX=00-23))
<ftp://tgftp.nws.noaa.gov/SL.us008001/ST.opnl/DF.gr2/DC.ndgd/GT.gimp/AR.conus/VP.001-003>

The addition of these products to the SBN and NDGD will be advertised in a future TIN. We anticipate these products to add roughly 100 MB of data to the SBN and NDGD server once per hour at approximately 29 to 40 minutes past the hour.

This RC also plans for the TOC to distribute GLMP products to the National Climatic Data Center (NCDC). However, at the time of this RC, the NWS Telecommunications Operations Center (TOC) hardware cannot process the GLMP file sizes listed in Table 1 (attached) for NCDC distribution in a manner that would not tax the NCDC servers and file listings. Therefore, once the TOC has the upgraded hardware in place to accommodate the GLMP file sizes (possibly Summer 2011 when GLMP becomes operational), the TOC will give notification when the GLMP products can be distributed to NCDC. See Figures 1 and 2 for GLMP data routing from NCEP to TOC and SBN without and with TOC hardware upgrades.

WMO Headings for Gridded LAMP (GLMP) Products

WMO headings have the format of $T_1T_2A_1A_2ii$ CCCC

1. The CCCC for all Gridded LAMP (GLMP) product WMO headings is **KMDL**.
2. The T_1 for all GLMP products is **L**.
3. The T_2 represents the weather element type designator.

Values for 0-hour observation T_2 are:

A = temperature at sensor height (nominally, 2 m)
 B = dew point temperature at sensor height (nominally, 2 m)
 C = ceiling height
 D = visibility

Values for 1-25 hour forecast T_2 are:

K = temperature at sensor height (nominally, 2 m)
 L = dew point temperature at sensor height (nominally, 2 m)
 M = ceiling height
 N = visibility

Note that T_2 skips letters between 0-hour observation and 1-25 forecast grids so that elements can be added in the future and subsequent to the appropriate list, observations or forecasts.

4. The A_1 designates the geographical area. This implementation is over CONUS only and therefore $A_1=U$
5. As there are multiple grids for GLMP 0-hour temperature and dew point elements and there is the possibility of multiple grids for the GLMP elements in the future (i.e. forecast probability grids), A_2 for individual element headers will represent those multiple grids per element. The ii will represent the cycle time for the observation grids and number of hours past cycle time for the forecast grids.
6. Since there will be multiple GRIB2 messages for the GLMP forecast grids in the same file, they will be grouped under a superheader where the A_2 and ii will be "**Z**" and "**98**", respectively, when being routed to the tgftp at the TOC for NDGD. As there will only be one grid per header for the GLMP observations, superheaders will not be necessary for those grids.

NWS REQUEST FOR CHANGE FORM	1. WSH TRACKING NUMBER 12654	1A. REV LEVEL	2. DATE RECEIVED February 23, 2011
--	--	---------------	---------------------------------------

GLMP 0-hour observation grids:

LAUAii KMDL - Temperature
LAUBii KMDL - Temperature Error Estimation
LBUAii KMDL - Dew Point
LBUBii KMDL - Dew Point Error Estimation
LCUAii KMDL - Ceiling Height
LDUAii KMDL - Visibility

ii = valid UTC hour (00-23)

GLMP 1-25 hour forecast grids:

LKUAii KMDL - Temperature
LLUAii KMDL - Dew Point
LMUAii KMDL - Ceiling Height
LNUAii KMDL - Visibility

ii = forecast projection (01-25)
