

NCEP Short-Range Ensemble Forecast (SREF) System: Hydrology Relevance

Jun Du, Geoff DiMego and Zoltan Toth

(for the DOH Hydrological Ensemble Workshop, July 16, 2008)

<http://www.emc.ncep.noaa.gov/mmb/SREF/SREF.html>

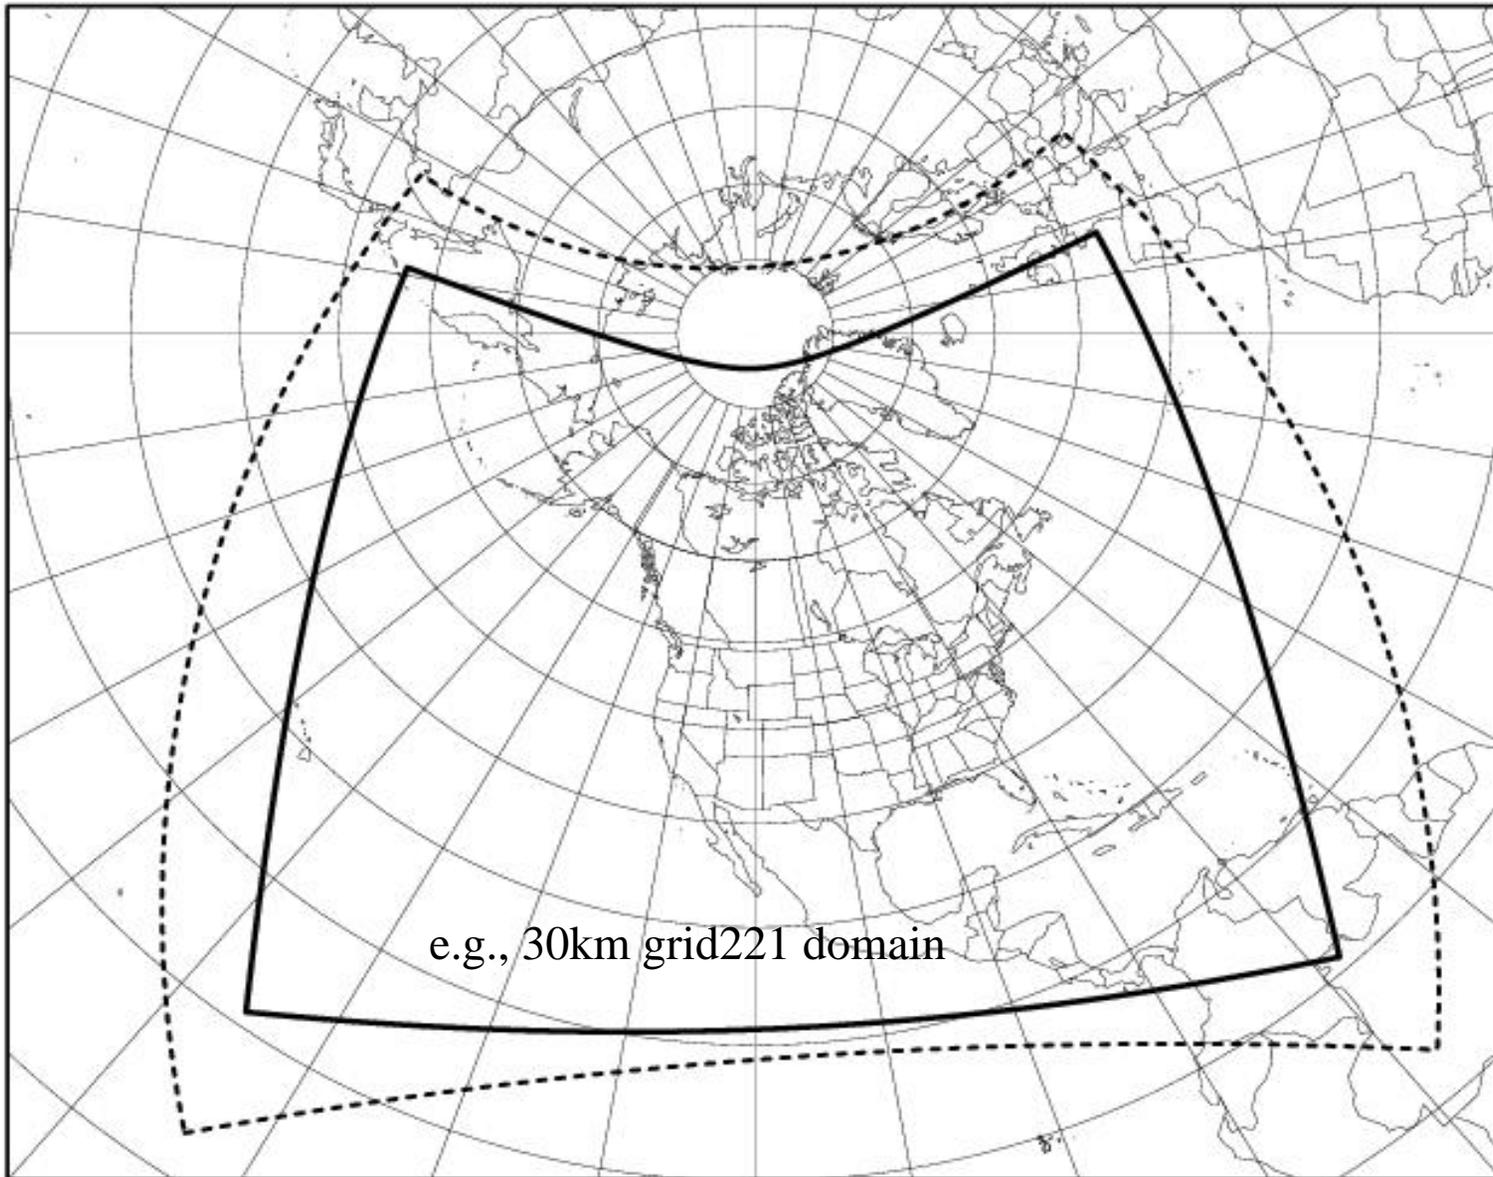

<http://www.nco.ncep.noaa.gov/pmb/nwprod/analysis/>

Acknowledgement: NCEP director, Dr. Louis Uccellini, and EMC director, Dr. Stephen Lord, for their always support to the SREF

The current SREF configuration

- Entire North America domain (covering U.S., Canada, Mexico, Eastern Pacific and Western Atlantic)
- 21 members (with 4 regional models)
- 32-45km depending on models
- Run 4 times per day (03, 09, 15 and 21z)
- 3hrly output to 87hr for each cycle
- 4 AWIPS output domains: NorthAmerican (221, 30km), CONUS (212, 40km), Alaska (216) and Eastern Pacific/Hawaii (243)

DASHED = EXPANDED NAM-12 ; SOLID = GRID 221

SREF Data

- AWIPS (mean, prob and spgt in grid212)
- NOMADS (same as above plus individual members)
- Public ftp site (same as AWIPS plus individual members of selected fields)
- NCEP CCS (NCEP internal)
- 2-year archive of all grib outputs (NCEP internal).
- Personal help (temporally and limited efforts, such as data to RFC)

Hi-Res Window (HRW) runs

Before the 2007 change: Large
& Small Domains

5.2 km for WRF-NMM

5.8 km for WRF-ARW

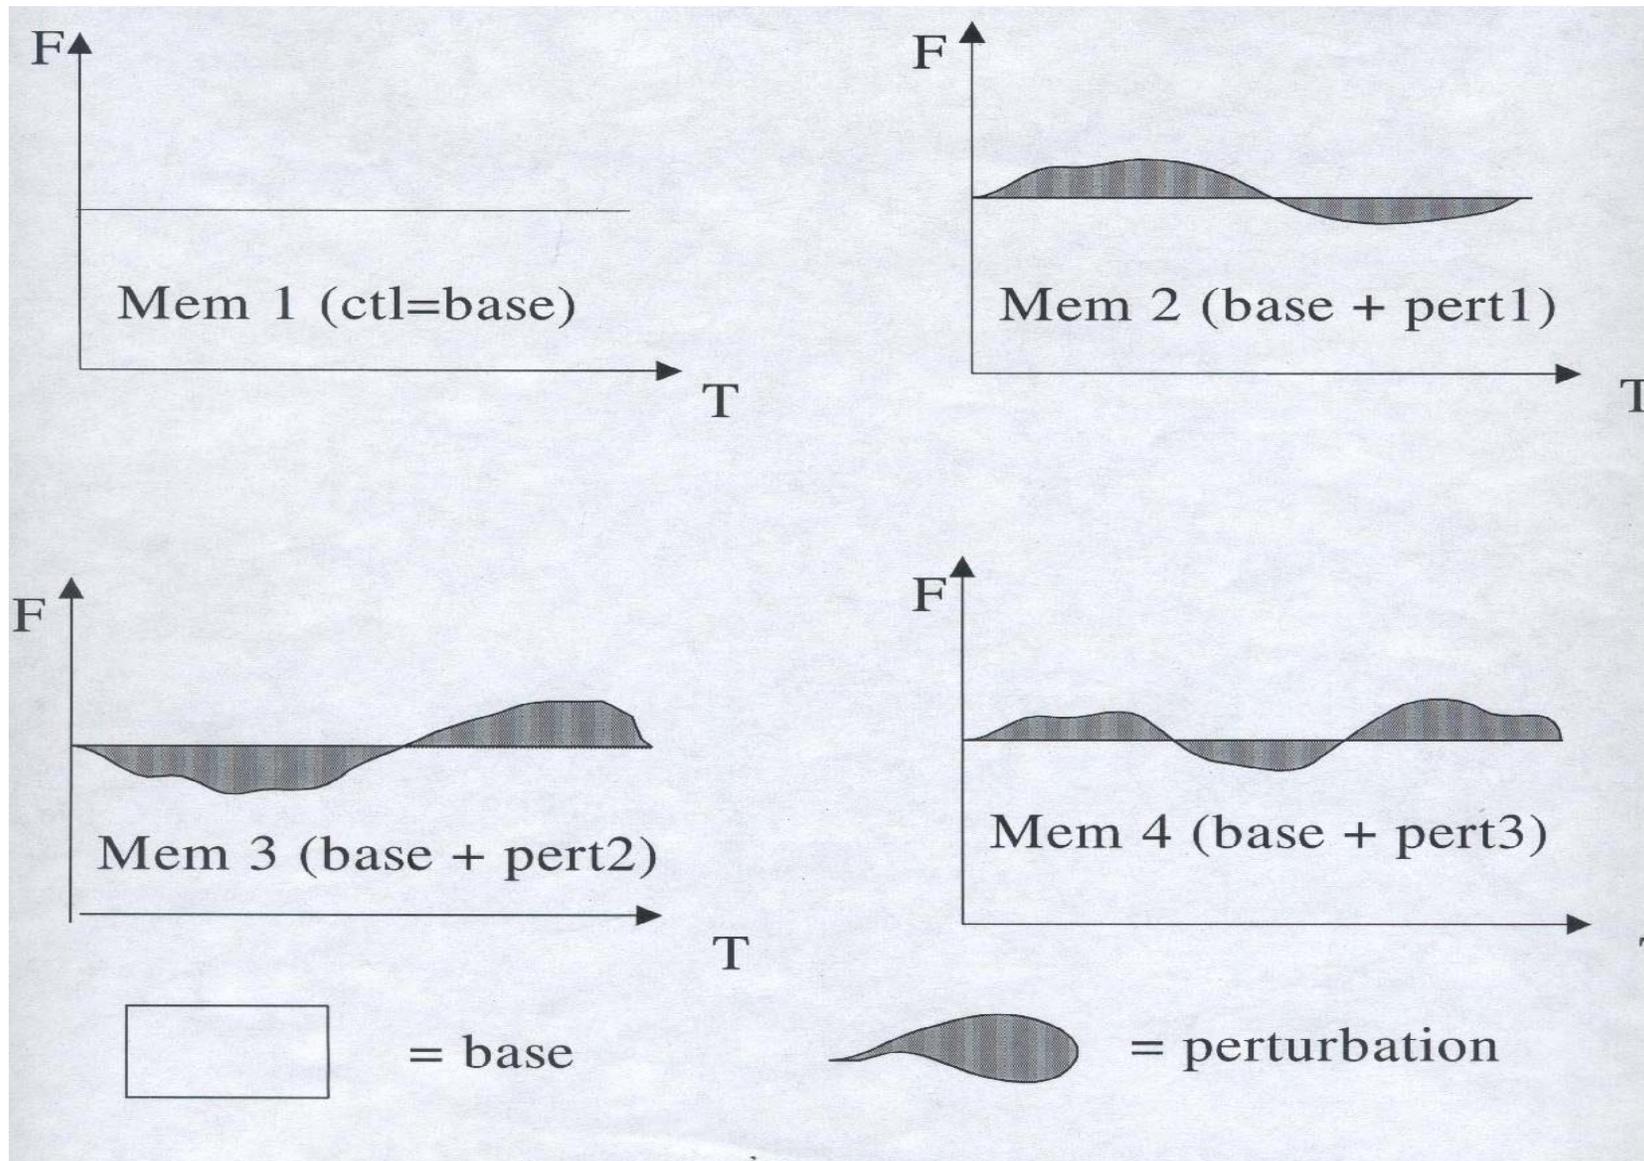

Current: new Large Domains

4.0 km for WRF-NMM

5.1 km for WRF-ARW

Small domain size is unchanged

Dynamically Downscaled Ensemble via. Hybrid Ensembling approach (Du, 2004): Combining the forecast variance from 40km-SREF and the base forecast from 4km-HRW wrf runs (44 mems!)

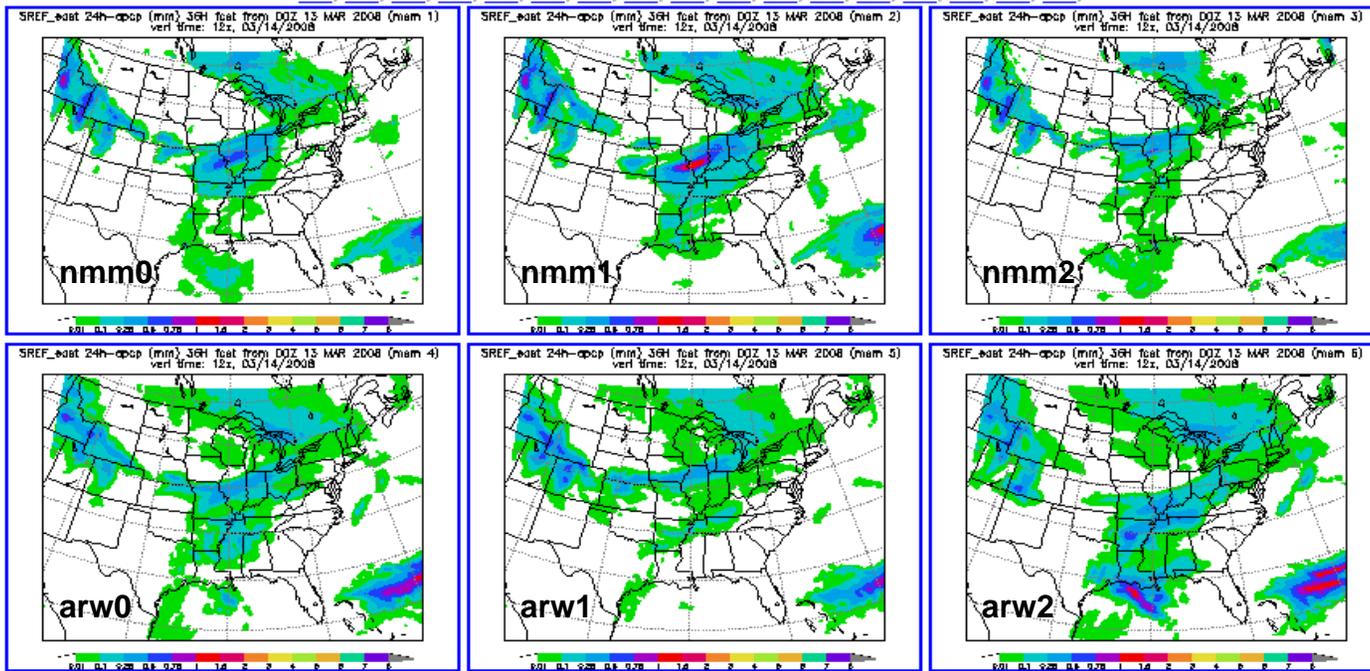

Downscaled Variables in the test (18)

4km-HYB members

Eastern & Western QPF bias with WRF_NMM changing from 5.2km-prod to 4km-para (2007, both explicit): removal of “high-precipitation” bias residing in hi-res forecasts is critical in the Dynamical Downscaling

Eastern (WRF-NMM), 8/18 to 8/28

Western (WRF-NMM), 8/18 to 8/28

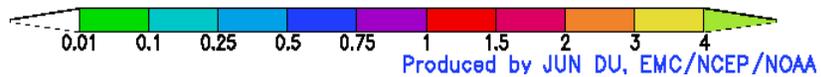

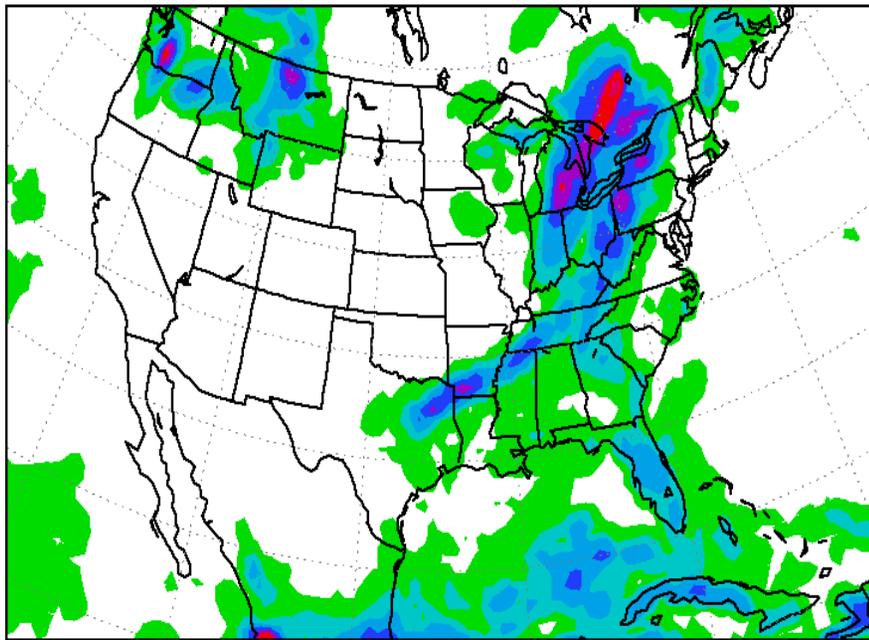

(2) SREF System Upgrade in Fall 2008

Relevant Changes

- **Model version upgrade for NMM (2.2), ARW (2.2) and RSM (2008)**
- **Resolution increase to 32km for 40kmNMM, 45kmARW and 45kmRSM**
- **Increase WRF membership: from 6 to 10 (5 NMM and 5 ARW) and reduce Eta membership from 10 to 6**
- **Replace Ferrier microphysics scheme with WSM3 scheme for ARW members for good**
- **More physics diversity for RSM members: replace Zhou cloud scheme with Ferrier scheme for 3 SAS members**
- **September 23, 2008 targeted implementation date.**

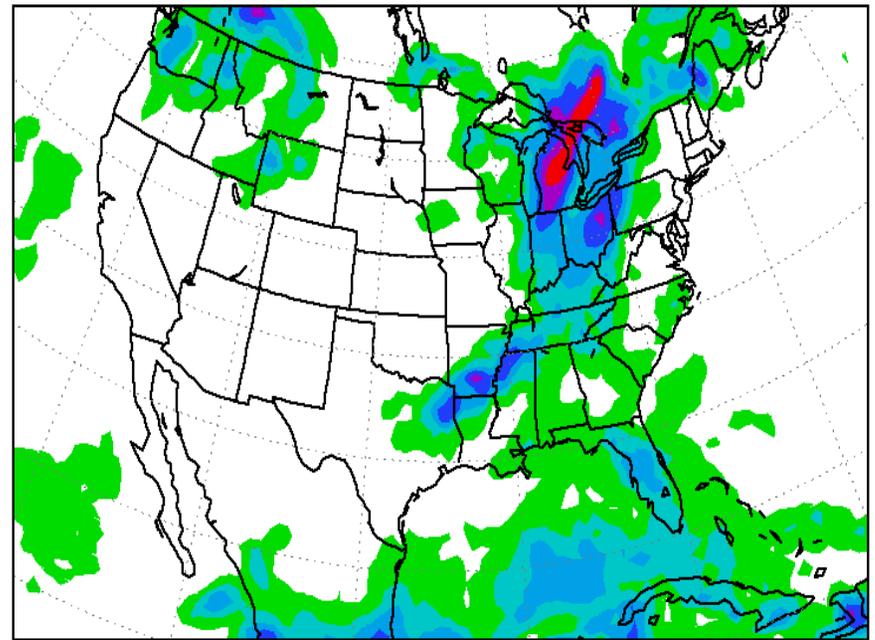

Old version vs. New version: precipitation forecast

COM_US 12h-apcp (in) 24H fcast from 21Z 09 JUN 2008 (mem 6)
verified time: 21z, 06/10/2008

32km new ARW

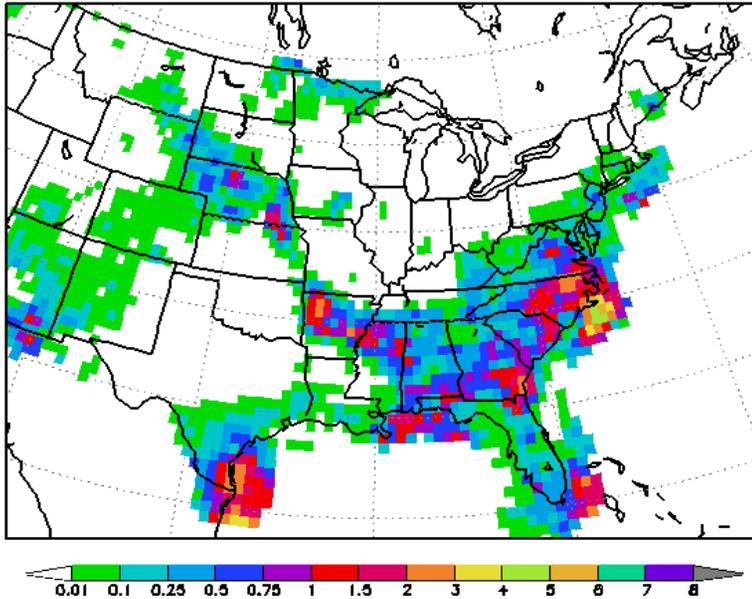

COM_US 12h-apcp (in) 24H fcast from 21Z 09 JUN 2008 (mem 20)
verified time: 21z, 06/10/2008

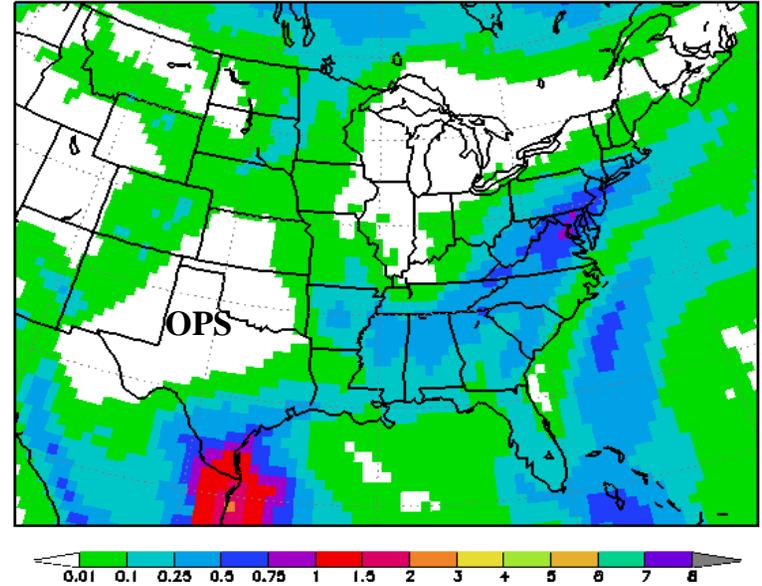

45km old ARW

SREF mean precip fcsts: old vs. new

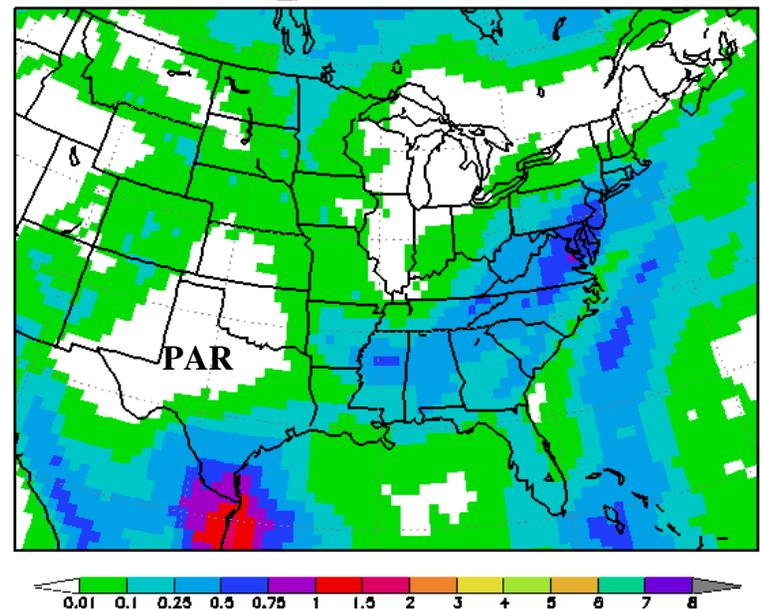

24H-APCP 4kmST2 ANALYSIS VALID 12Z 06 JUL 2008

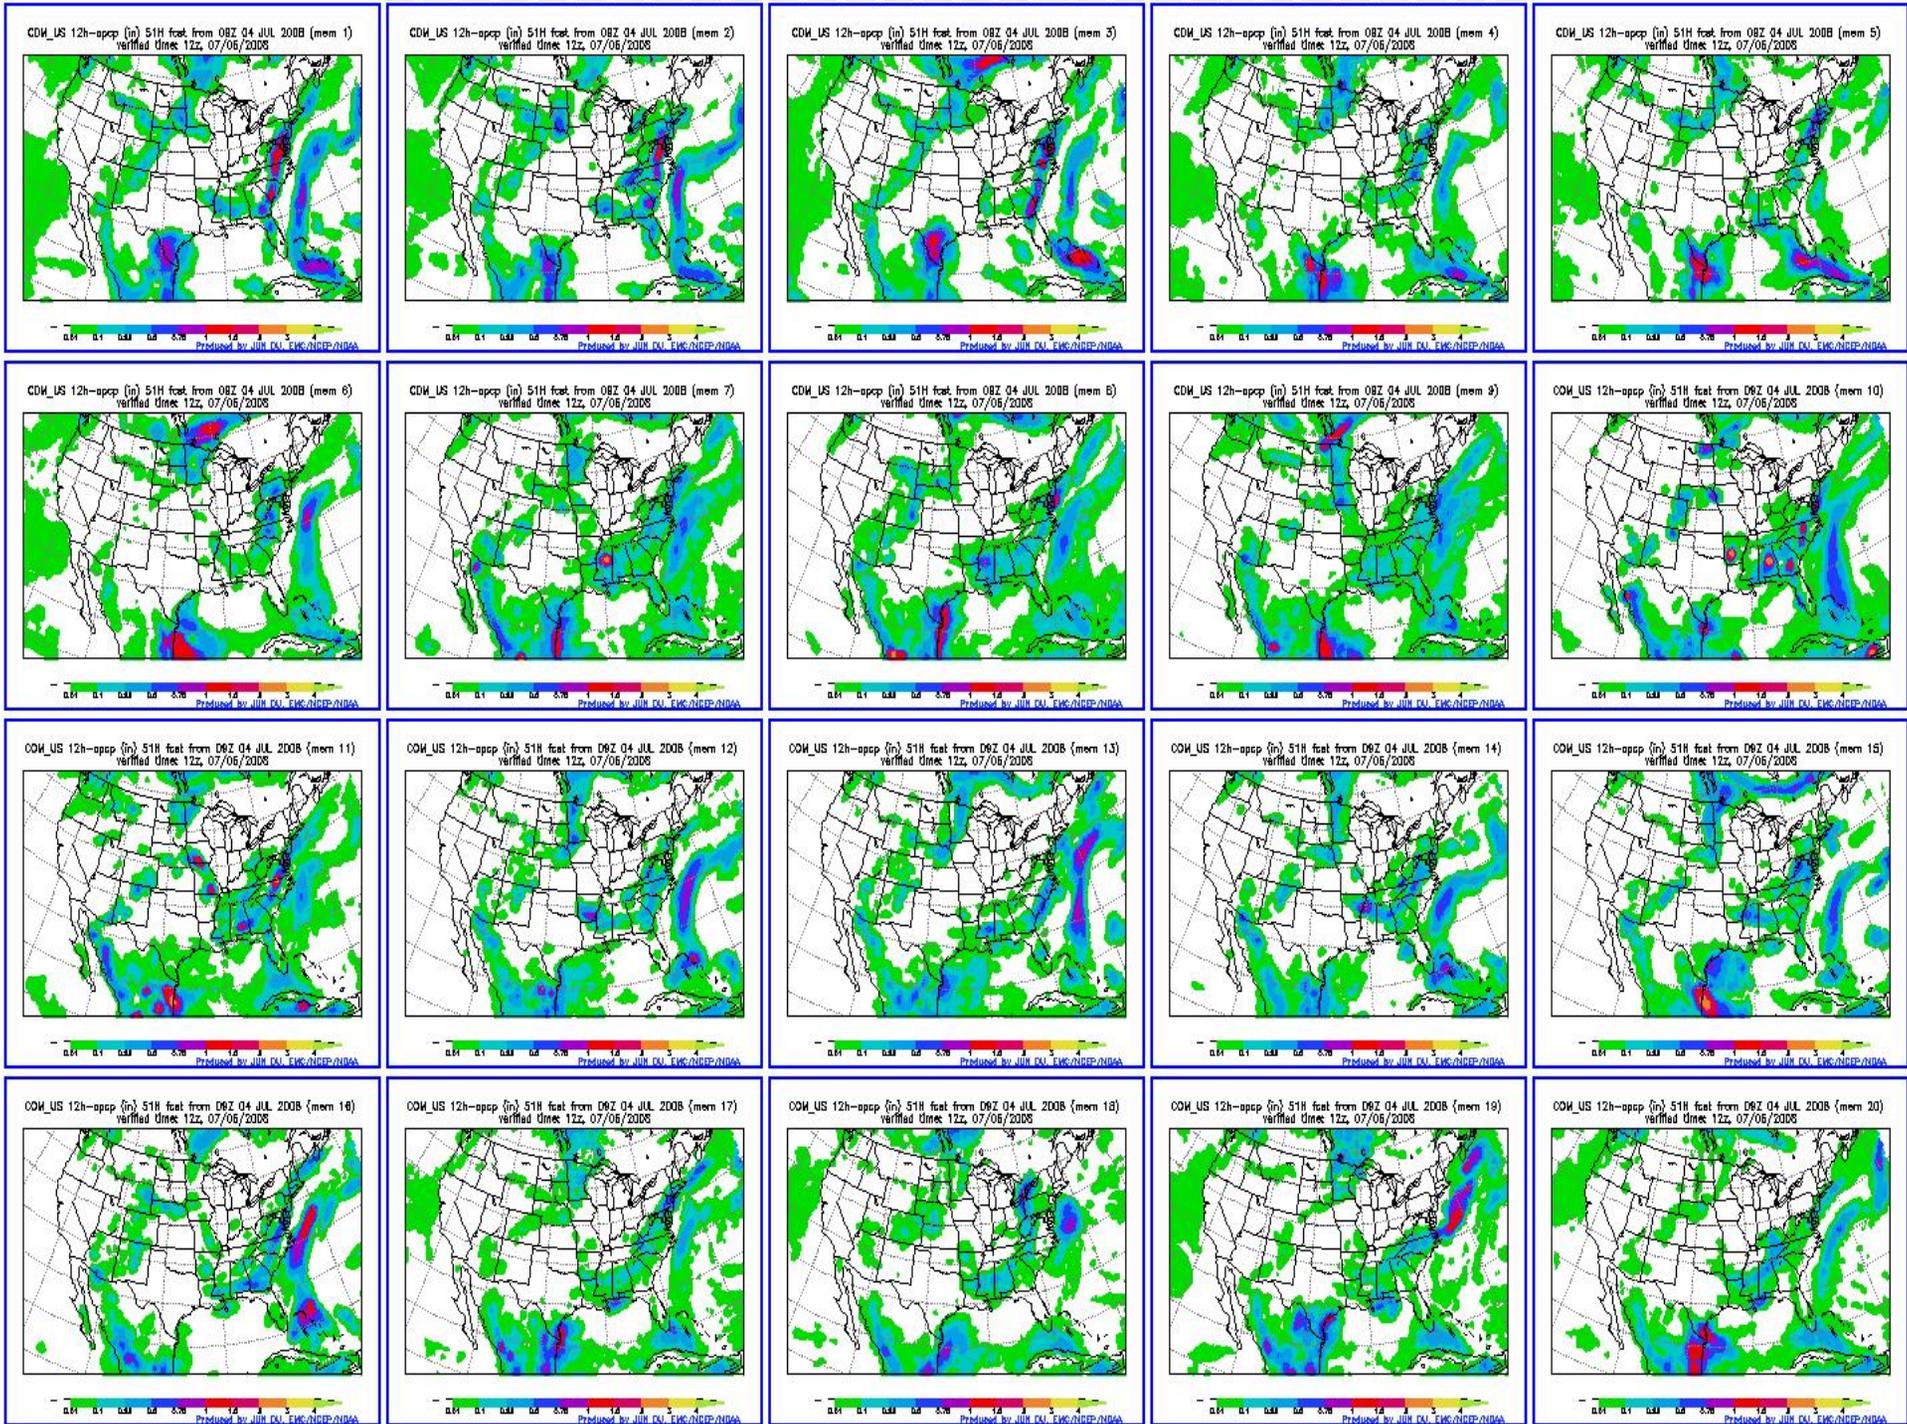

27-51H-APCP SREFmn_ops 51H FCST VALID 12Z 06 JUL 2008

27-51H-APCP SREFmn_par 51H FCST VALID 12Z 06 JUL 2008

- (1). There is really not much difference between old and new SREF means;
- (2). As a common characteristic, ens mean always severely over-estimates light-precip area and underestimates heavier-precip area.
- (3). Therefore, it is recommended that ens mean of precip should not be used but probabilistic precip fcst should be used instead.

Science Behind SREF

IC uncertainty: multi-analysis (NDAS and GDAS) and IC perturbations (breeding);

Model physics uncertainty: multi-model (4 models) and multi-physics schemes (e.g., 6 different convective schemes and various microphysics) etc.;

LBC/large-scale flow forcing uncertainty: coupled with GEFS;

Lower-boundary forcing uncertainty: perturbing land surface initial states (tested but not implemented yet);

Bias correction: decaying-average statistical approach;

Downscaling: both dynamical and statistical approaches.

Outlooks

- All-WRF SREF system with about 20km resolution (~**2010**)
- Relocatable fine-res High-impact Weather Forecast Ensemble (HWEF) system (after **2010**)
- NAEFS-LAM (combining with Canadian SREF, after **2010**)
- Concurrent run with NAM, GFS (00, 06, 12, 18z) (after **2011**)
- All ensemble systems run under ESMF/NEMS framework (after **2012**)
