

Purpose

MOD APICBASF multiplies the Operation API-CONT baseflow runoff by the specified value for the specified date.

The baseflow runoff is changed by adjusting the baseflow storage contents (BFSC) by the multiplier specified. The change is not made if either BFSC or the baseflow index (BFI) are explicitly changed for the date with the APICCO MOD. Changes cannot be made for the STARTRUN date.

Format

Use Format B3 with one date on the command card.

```
.APICBASF date [ FGROUP ]  
identifier value [ / opname ]
```

where date is the date which must be less than or equal to Technique
LSTCMPDY and must be within 12 hours before Technique
STARTRUN or ENDRUN
value is the baseflow runoff multiplier

Example

In this example baseflow runoff for Operation API-CONT is adjusted for two Segments.

```
.APICBASF 0910  
PETW2POT 0.7  
FDKM2MCY 1.2
```
