

## C-4. Pre-Defined DB Tables

With the initial rollout of the RAX (ob1), most of the reference tables in the RFC Archive Database were already populated for each River Forecast Center (RFC). These tables are: *huc2*, *huc4*, *huc6*, *huc8*, *country*, *state*, *counties*, *rfc*, *wfo\_hsa*, *shefdur*, *shefpe*, *shefpe1*, *shefpetrans*, *shefprob*, *shefqc*, *shefts*, *modctrl* and *datalimits*. The contents of these tables are covered in Appendix B. The standards for most of the archive database's reference tables are based on standards developed for the IHFS database. Whenever possible an effort has been made to be consistent with the IHFS database guidelines, but there may be some differences.
