

STATUS REPORT - December 2006

Move to PostgreSQL, Build OB7.2

Arleen Lunsford and Juliann Meyer are putting the finishing touches on the long overdue database column data dictionary (column look-up table). It has taken them close to three months, trading e-mails, working off and on to complete it. Arleen and Juliann wish to thank Brenda Alcorn (CBRFC), Steve Shumate (CBRFC), Kevin Hlywiak (MARFC) and Hank Herr (OHD/HL) for providing information and answering their numerous questions. In addition, a new Appendix covering "Overview of Quality Control Tools/Features" is also being worked on. These documents should be on the web sometime in January 2007.

Transition of OHD Archive Scripts

Juliann Meyer is still working with Donna Page to get this script integrated into the RAX baseline.

Team and Charter Renewal

Its time to renew the team charter and ask for volunteers to serve on it for the coming year. Donna Page has been busy updating and coordinating changes to the RAXUM team charter as its role in supporting the RAX is evolves and changes. A draft was sent to the regions in late December.
