

2013 Tropical Cyclone Fatalities

Fortunately, 2013 was not an active year for major tropical storms. There was only one tropical storm related death, a male who died in South Carolina's waters. Despite the low fatality rate, there were 14 named tropical storms in the Atlantic Basin in 2013, of which 2 had wind speeds measuring hurricane force, down from 10 in 2012. Most of these storms died in the ocean. The Pacific Basin was more active than the Atlantic with 18 named storms: 8 of which were designated hurricanes.
