THE PROBLEM

- In Florida, a family was trapped by floodwaters. They were rescued and later told their tale. But others didn’t fare as well.

- A man in Pennsylvania, who refused to abandon his home during an evacuation, later was swept away as he attempted to move his automobile.

- A woman in Arizona, Texas, trying to prove to her husband he was crazy enough to drive through fast flowing water, as he left his vehicle and attempted to walk to the other side.

These tragic events happen too often. Ironically, many drivers rescued from flood waters reported they were in a hurry to reach the safety of their home as a reason for attempting to cross a flooded road.

Automobile commercials advertising the ability to drive through water lead to a false sense of security at best and tragic consequences at worst.

The Centers for Disease Control (CDC) report that over one-half of all flood-related drownings occur when a vehicle is driven into hazardous flood water. The next highest percentage of flood-related deaths is due to walking into or near flood waters.

THE REASON

Where does the idea that “my heavy vehicle will keep me safe” come from? Perhaps from the false trust in the weight of the vehicle you drive.

Many believe their 3,000 pound or more vehicle will remain in contact with the road surface … that it is too heavy to float. Think about that for a moment. An aircraft carrier weighing 97,000 tons floats.

Vehicles (and ships) float because of buoyancy. In fact, most cars can be swept away in 1½ to 2½ inches of moving water. Trucks and SUVs do not fare much better with an additional 6-12 inches of clearance.
Actually, in moving water, all that needs to happen is for the vehicle to become buoyant enough for the force of the moving water to push it sideways. Once swept downstream, the vehicle will often roll to one side or perhaps flip over entirely. The driver then only has a few seconds to escape the vehicle.

**The Solution**

The solution is simple. **Turn around, don’t drown.** Stay out of flooded roadways. The water may be much deeper than it appears as the roadway may be washed out. Also, respect the “road closed” banner that may be posted to warn you of danger.

This solution applies to anyone attempting to walk or wade through flowing water. As little as 6 inches of rapidly moving water can sweep you off your feet.

Consider carefully where you camp and/or park your vehicle along a stream or wash, especially during threatening conditions.

Be especially cautious at night when it is harder to recognize flood dangers.

Finally, know when you are at risk! Keep abreast of the latest weather watches and warnings from the National Weather Service with the NOAA Weather Radio All Hazards or through your favorite news source.

**FLOODING AHEAD**

**TURN AROUND**

**DON’T DROWN**

The Manual on Uniform Traffic Control Devices (MUTCD) and Standard Highway Signs (SHS) book contain provisions for this type of incident warning sign, including size of the legend, colors, and shape. State and local highway agencies should warn motorists of temporary flooding conditions by using signs such as this. For further information, both the MUTCD and SHS can be found at http://mud.mtc.gov/.

In addition to NWS watches and warnings, road condition information during adverse weather is widely available from State Departments of Transportation. This information can be found on websites or by phone. Go to http://www.fhwa.dot.gov/traffic/info/index.htm to get this information online. Or, call 511 to get travel condition information. The 511 service is being deployed across the country to enable travelers to make better choices—choices of time, mode of transportation, or route.

For real-time forecasts and warnings to save lives and property, visit www.weather.gov.
"Floods never happen here. Tom was trying to get home. He drove on the road near the stream every day. We knew it had been raining a lot, but it had been so dry, we were actually happy about the rain. Tom saw some water on the road, but thought it wasn’t deep. And after all, he was in a truck, high up off the ground. But then his truck started to float, and before he knew it, his truck was washed downstream with him in it. Fortunately, his truck got stuck on a rock or something, and someone saw him and threw him a rope. Tom got out okay. But we really learned from this, not to drive in floods."

Testimony of Marilyn and Tom (last name withheld), interviewed by the American Red Cross after Tropical Storm Allison struck Texas in late June 2001.
