

AWIPS II Governance

AWIPS II Governance Definition: Governance is the specific set of measurable policies and controls, standards and best practices methodologies that document the AWIPS decision making process in the areas of requirement definition, development paradigm, release process, installation, and system standards

AWIPS II Governance Goals: (1) Maintain the integrity and improve maintainability of current baseline so that it can meet the operational needs of the field; (2) Provide quality products with confidence; (3) Provide an atmosphere for quicker controlled deployments; (4) Provide flexibility for developers to do creative work: and (5) Provide atmosphere to foster collaboration

Governance Vision Team: The [Governance Vision Team](#) was assigned the task of defining the decision processes for AWIPS II. This link includes a list of project sponsors and stakeholders.

Stakeholders – Persons or organizations that are actively involved in the project or whose interests may be positively or negatively affected by the policies and controls, standards and best practices methodologies developed by this project or have influence over the project and it's deliverables.

Roadmap - Schedule for the definition of AWIPS II Governance

Current AWIPS I Governance – Current AWIPS I Governance decisions, current methods, responsibility documentation and tools.

Governance Sub Teams – Sub Teams that will be formed to document policies and controls, standards and best practices methodologies.

Local Applications Pilot Team - Governance sub team to review the requirement definition, development paradigm, release process, installation, and system standards for local applications

Baseline Software Team - Governance sub team to review the requirement definition, development paradigm, release process, installation, and system standards baseline software (TBD).

Baseline Hardware Team - Governance sub team to review the requirement definition, development paradigm, release process, installation, and system standards for baseline hardware changes (TBD).

Local Hardware Team – Governance sub team to review the requirement definition, development paradigm, release process, installation, and system standards for local hardware. (TBD)

Governance Status Briefings – Weekly status of governance project.

Governance Vision Team Briefings – Governance Vision Team Meeting briefings.

Governance Documentation Repository - Repository for resulting all AWIPS II Governance policies and controls, standards and best practices methodologies. (TBD).
