

AWIPS II Topic of the Week -- Task Order 11 (TO11) Slice 3 Delivery

All,

Wednesday, June 3, Raytheon conducted the Task Order 11 (TO11) Slice 3 Delivery Briefing. Raytheon highlighted some architectural changes, as well as, technical information regarding the AWIPS Migration software including:

- ARINC Communications Addressing and Reporting System (ACARS) sounding has been added in the software and the ACARS plug-in has been improved
- Hydro perspective overlays menu allows sites to use common maps with D2D, GFE and MPE
- There are approximately 26 Service Oriented Architecture (SOA) data type plug-ins, such as mesonet, shef hydro, and quantitative precip forecast

Many thanks to the Raytheon team for putting together an informative Delivery Briefing. The slice-3 software is being tested here at HQ and a few other locations, to verify the installation as well as basic functionality before broader delivery to the National Core Local Applications Development Team (NCLADT) and User Functional Evaluation (UFE) sites for testing. SEC encourages everyone to start viewing and working with the new software. As always, we welcome your feedback and collaboration. To find out more about the TO11 Delivery Briefings check the presentations page on the AWIPS Tech Infusion web site (<http://www.nws.noaa.gov/ost/SEC/AE/Presentations.htm>).
