

AWIPS II Topic of the Week -- AWIPS National Core Local Application Development Team (NCLADT) Workshop

All,

The Office of Science & Technology (OST) will sponsor a National Core Local Application Development Team (NCLADT) Workshop, as part of the AWIPS II migration effort, tentatively scheduled for Fall 2009. The NCLADT team which is comprised of field personnel supported by OS&T and OOS staff is taking the lead in writing, testing, and maintaining local application infrastructure code with the goal of reducing risk associated with migrating/porting local applications to the new services oriented architecture environment. In addition, the NCLADT will examine to consolidate duplicate and to cull out the less useful local applications. As we get closer to fielding AWIPS II to the Operational Testing & Evaluation (OTE) sites, the team's focus is on establishing local application migration processes which need to be exercised prior to the start of OTE. The OTE sites must have their local applications migrated prior to verifying the site's readiness for OTE. In addition to the workshop, the NCLADT team will conduct a Technical Interchange Meeting (TIM) with the Raytheon developers in Omaha. Please stay tuned for additional information regarding the NCLADT Workshop in the coming months. OS&T encourages everyone to start viewing and working with the new software. As always, we welcome your feedback and collaboration. To find out more about the NCLADT activities or if you have questions for the NCLADT team, check the local application migration page on the AWIPS Tech Infusion web site (http://www.nws.noaa.gov/ost/SEC/AE/Site_Migration.htm).

To join the mailing list for these messages, please contact Fran Curnow at Frances.Curnow@noaa.gov.
