

AWIPS II Topic of the Week -- Deployment and Transition Planning

All,

On Nov 3, the Raytheon team presented to the OS&T their interim status on the Deployment Transition Planning (DTP) Task Order. This task order focuses on planning for the very knotty problem of actually moving a site from AWIPS I to AWIPS II. It includes issues like interoperability between AWIPS I sites and AWIPS II sites. Given the trouble we have with interoperability just between builds of AWIPS I, we know this issue requires careful consideration. Another important area of planning the Raytheon team has been investigating is site readiness preparation and verification. Another difficult problem. For a more complete description of the topics covered in the DTP task, you can check the DTP Proposal off the ATI web page at the link below. The task ends at the start of February so we will have more information on these important topics then.

Thanks ,
Edwin

DTP topics can be found at the bottom of this page.
